## PREFACE

The threat of extinction facing many wildlife species is of increasing concern and interest to wildlife managers and to the general public. This concern and interest has been particularly acute with regard to wolves and the proposals to reintroduce them into portions of their historical range. Reintroductions of red wolves (*Canis rufus*) are the only successful wolf reintroductions to date, and the recovery program for this species has laid much of the groundwork for the reintroduction of other wolves and wildlife species. This success has generated continuing requests for information about the species and its recovery. Because of the need for information, this Red Wolf Bibliography has been prepared.

Early literature does not clearly identify the species involved; therefore, this bibliography includes all references to wolves within the historic range of the species as defined by Nowak (1970). References are arranged alphabetically by author. The period covered by this bibliography is from 1900 though 1993, but a few significant titles with earlier dates have been included. Although there are a few exceptions, newspaper articles, taxonomic works, and general field guides generally have not been included.

The idea for this bibliography came from a limited red wolf bibliography compiled by the Knoxville Zoo as part of a red wolf conservation package prepared for the zoo community in 1993. This beginning bibliography was combined with a bibliography compiled by Fodor (1970) and then supplemented by references solicited from and provided by each of the authors. No attempt was made to research literature and bibliographic and literature indexes. However, the authors are familiar with the literature published since Fodor's 1970 bibliography, which did consult indexes. Therefore, the bibliography is believed to be fairly complete. Additionally, many of the references, especially earlier ones provided by Fodor in 1970, were not reviewed by the authors due to a lack of adequate time and library resources. These references may contain unidentified errors.
